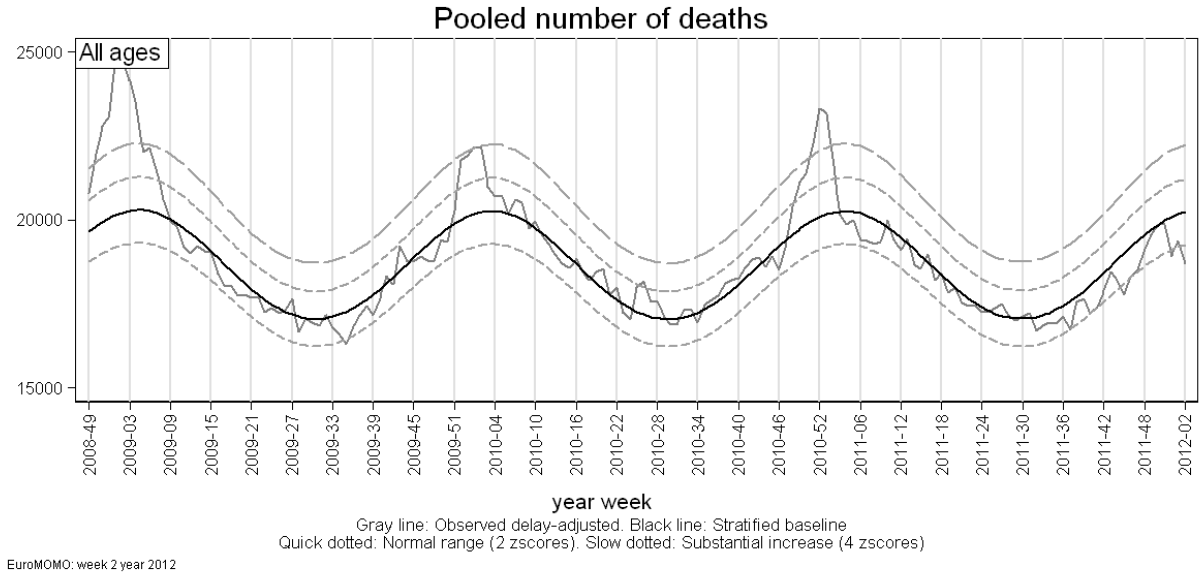
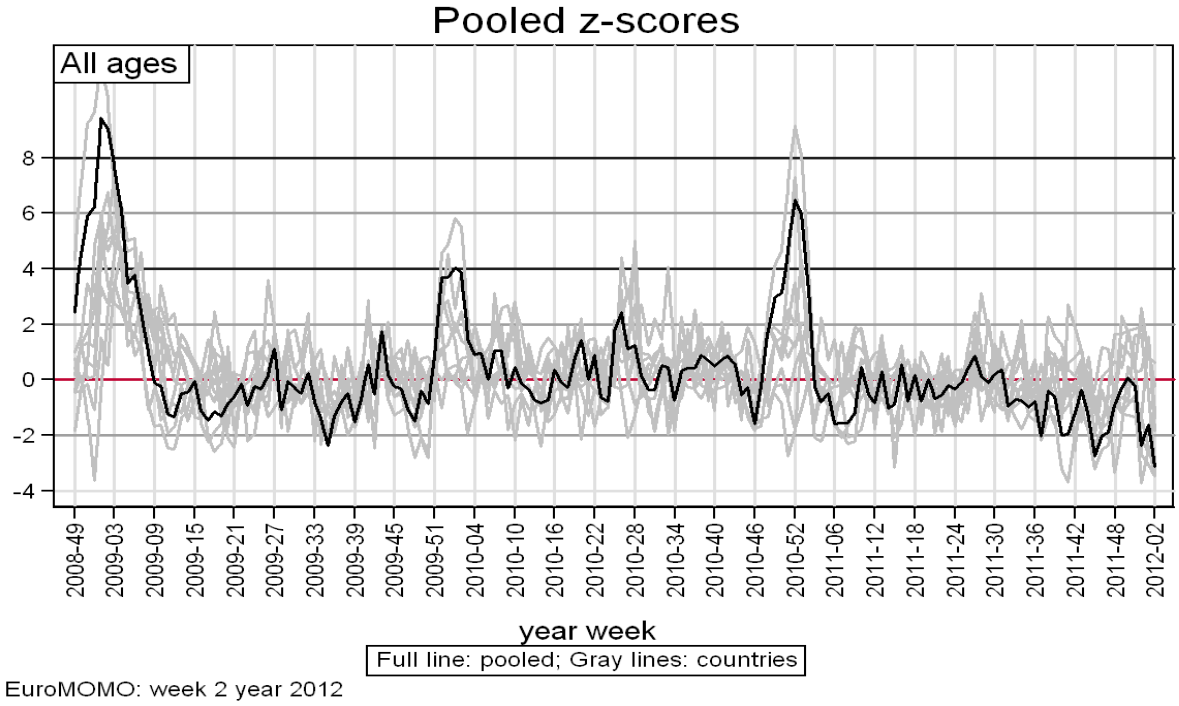
European monitoring of excess mortality for public health action

European mortality bulletin week 2, 2012: Pooled total all-cause mortality is still low for this time of the season.

Since the beginning of the 2011/2012 influenza season, all-cause number of deaths, corrected for delay in local reporting of deaths, has been below 2 z-scores from the baseline.





The pooled analyses, based on eight countries, were adjusted for differences in local delay of reporting and heterogeneities in pattern and variation between the included countries.
