

## **European Mortality Bulletin, week 32 2019:**

Pooled estimates of all-cause mortality show mortality levels within normal expected ranges overall for the participating countries. However, the Netherlands, and possibly other countries, has seen a small increase in mortality in the past few weeks, which could be related to the high temperatures experienced during the current summer season in Europe. Mortality estimates for the past few weeks are however still uncertain due to the delay-adjustment.

Data from 20 countries or regions were included in this week's pooled analysis of all-cause mortality.

The number of deaths in the recent weeks should be interpreted with caution as adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>.

### Pooled number of deaths

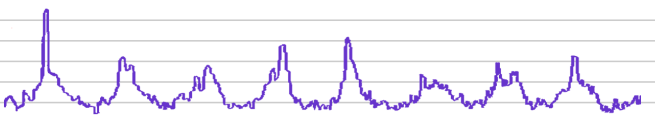

EuroMOMO: week 32, 2019

#### Participating countries:

Denmark, Finland, France, Germany (Berlin), Germany (Hesse), Greece, Hungary, Ireland, Italy, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, UK (England), UK (Northern Ireland), UK (Scotland), UK (Wales)
