

**European mortality bulletin week 22, 2011:** Mortality has since the middle of January been within the normal range for all countries.

Over the last month, all-cause number of deaths, corrected for delay in local reporting of deaths, has been below 2 z-scores, with some variations between countries (spread in z-scores). An increasing number of deaths have been observed in two countries over the last weeks. However, this is not related to the STEC outbreak in Germany.

EuroMOMO: week 22 year 2011

EuroMOMO: week 22 year 2011

Cumulated excess deaths for this season compared to previous seasons are within the same range. Among adults (15 to 64 years of age) a lower number of excess deaths compared to previous seasons seem to continue

### Pooled relative cumulated excess deaths Age group 15-64 years of age
