

European mortality bulletin week 32, 2011: Mortality has since the middle of January been within the normal range for all countries. However, it has been increasing the last month.

Over the last months, all-cause number of deaths, corrected for delay in local reporting of deaths, has been below 2 z-scores; except over the last month where there seems to be an increasing trend in number of deaths. A pattern also observed previous years and probably associated to heat waves. However, the explanation may to some extent also be linked to the adjusted for delay in registration.

EuroMOMO: week 32 year 2011

EuroMOMO: week 32 year 2011

The analyses, based on nine countries, were adjusted for differences in local delay of reporting and heterogeneities in pattern and variation between the included countries.
