

European mortality bulletin week 9, 2012: All-cause mortality among the elderly is increased in the pooled analysis of European countries submitting data this week. Excess mortality is detected since week 6. Because data from week 9 are likely to be influenced by reporting delay, we do not know if excess mortality has peaked yet. The excess mortality concurs with elevated influenza activity in Europe as well as with a cold snap that affected Europe in the beginning of February.

EuroMOMO: week 9 year 2012

EuroMOMO: week 9 year 2012

The pooled analyses, based on eleven countries, were adjusted for differences in local delay of reporting and heterogeneities in pattern and variation between the included countries.
