

European mortality bulletin week 22, 2012: Pooled all-cause mortality has over the last weeks been above the upper limit of the expected range for this time of the season. However, there is a considerable variation between the countries, and excess mortality has been seen in a few countries only (most of the gray lines are around 0 on the z-score graph). No clear reason for this has been identified. The development is followed intensively.

EuroMOMO: week 22 year 2012

EuroMOMO: week 22 year 2012

The pooled analyses, based on ten countries, were adjusted for differences in local delay of reporting and heterogeneities in pattern and variation between the included countries.
