

European mortality bulletin week 36, 2012: Pooled all-cause mortality has over the past weeks been within the expected range, apart from an isolated excess peak among 5-14 years olds in week 34. This occurred only in a couple of countries and investigations into the cause of the excess are being carried out. Partly this may be due to uncertainties in adjustment for delayed registrations.

Pooled number of deaths

Grey line: Observed delay-adjusted. Black line: Stratified baseline.
Quick dotted: Normal range. Slow dotted: Substantial increase.

EuroMOMO: week 36 year 2012

The pooled analyses, based on nine countries, were adjusted for differences in local delay of reporting and heterogeneities in pattern and variation between the included countries.
