

European mortality bulletin, week 52 2016:

The reported all-cause mortality has in most of the reporting countries been within normal expected levels over the past weeks, with the important exception of Portugal, where a large excess in mortality has been observed in the age group of 65+ years.

Data from 14 countries or regions* were received this week and included in the pooled analyses.

Excess mortality levels in most recent weeks may be difficult to interpret because adjustment for delayed registrations may be imprecise. Further, results of pooled analyses may vary depending on which countries were included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>

* Denmark, Estonia, Finland, France, Greece, Hungary, Ireland, Malta, the Netherlands, Norway, Portugal, Spain, Sweden and Switzerland.
