

European Mortality Bulletin, Week 29, 2017:

In most countries, the all-cause mortality has been within expected levels in the past few weeks; however, a transient increase in mortality has been recorded in some countries in southern Europe.

Data from 14 countries or regions were received this week and were all included in the pooled analysis of all-cause mortality.

Number of deaths in the past weeks should be interpreted with caution because adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>

Pooled number of deaths

EuroMOMO: week 29, 2017

— Stratified baseline — Delay-adjusted number of deaths
- - - Normal range (+- 2 z-scores) . . . Substantial increase (4 z-scores)

Participating countries:

Belgium, Denmark, Estonia, France, Greece, Ireland, Netherlands, Norway, Portugal, Spain, Sweden
 UK (England), UK (Scotland), UK (Wales)
