

**European Mortality Bulletin, week 11 2018:**

Mortality has been elevated in a large number of European countries over the past few months, especially among elderly people. The mortality has declined by now in some countries, but remains markedly elevated in others.

Data from 24 countries or regions were included in this week's pooled analysis of all-cause mortality.

Number of deaths in the past weeks should be interpreted with caution because adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>

Pooled number of deaths

EuroMOMO: week 11, 2018
