

European monitoring of excess mortality for public health action

European Mortality Bulletin, week 29 2018:

Levels of all-cause mortality were at normal expected levels in all the participating countries.

Data from 24 countries or regions were included in this week's pooled analysis of all-cause mortality.

Number of deaths in the past weeks should be interpreted with caution because adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>.
