

European Mortality Bulletin, week 10 2019:

Pooled estimates of all-cause mortality show that the peak in excess mortality seen over the recent weeks appears to be declining. This excess mortality was seen in those aged 65 years and above, and to a lesser extent in the age group 15-64 years.

Data from 22 countries or regions were included in this week's pooled analysis of all-cause mortality.

The number of deaths in the recent weeks should be interpreted with caution as adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>.

Pooled number of deaths

EuroMOMO: week 10, 2019

— Stratified baseline — Delay-adjusted number of deaths
- - - Normal range (+/- 2 z-scores) - - - Substantial increase (4 z-scores)

Participating countries:

Austria, Belgium, Denmark, Finland, France, Germany (Berlin), Germany (Hesse), Greece, Hungary, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, UK (England), UK (Northern Ireland), UK (Scotland), UK (Wales)
